

Truck Recovery Unit

Custom Fluidpower's Truck Recovery Unit acts as an aid to recovering immobilised vehicles. This unique unit gives a hydraulic supply with various functions, an air supply and 12/24 Volt DC supply.

The Recovery Unit is designed with a single lift point and anchor points at each corner to enable easy slinging onto the back of a truck or ute. All hydraulic, air and power connections are via the comprehensive control panel from where hydraulic pressure, air pressure and battery power can be monitored as well as the engine controls.

The unit is built using a range of world class products including Sun, Parker, Hydac and Custom Manifolds.

Contact us today for more information or to discuss your unique requirements.
